

NotesMigrator[®] *for Exchange*

- Permits users to schedule the migration at a pre-selected time, through setting criteria.
- Views reports that provide detailed information about mailboxes, servers, domains, and other Lotus Notes information, prior to the migration.
- Allows administrators to set forwarding in Notes Migrator, or remove forwarding in Exchange, as users are migrated.
- Self-service Desktop Migrator migrates data like archives and personal address books.
- Migrates several users simultaneously through multiple migration workstations providing a high speed migration.

Complete control over your migration from Lotus Notes to Microsoft Exchange

Are you looking for the ability to migrate from Lotus Notes to Microsoft Exchange? Do you need to minimize the impact to your organization, while completing a migration project? Would pre-migration reports from Lotus Notes help you plan your migration? Do you want software that provides an easier migration from Lotus Notes to Microsoft Exchange through a project management interface allowing you complete control over the entire project?

Quest[®] Notes Migrator for Exchange provides a reliable high performance migration from Lotus Notes to Exchange while having a minimal impact on end users. It converts users' mail, calendars, tasks, personal address books and stores them in users' new mailboxes on the Exchange server. In conjunction with Notes Migrator you receive Quest MessageStats Report Pack for Lotus Notes Migration which enables the administrator to perform a pre-migration assessment for planning the path of the migration. The administrator can then monitor the progress of the migration plan through project management, by using up-to-date status reports. In turn, these reports give them complete visibility into the entire project.

Control with Project Management: Administrators have complete control over the entire migration project, along with up-to-date status reports on the migration progress.

Accurate Reporting: Pre-migration assessment can be performed in Notes Migrator, with MessageStats, to allow administrators to completely plan their migration and model their Exchange environment. It also allows for status reporting on the migration progress.

Enhanced Scheduling: Components of the migration project can be scheduled to run at the convenience of the organization, with minimal impact on the business.

Parallel Migration: Multiple users can be migrated simultaneously. It also allows for the installation of multiple migration consoles to migrate to multiple servers simultaneously, which will speed the entire migration process.

Simplified Administration: Automates manual administrative tasks, including mailbox creation and mail routing, saving time and preventing errors.

Reduced Help Desk Calls: User data is migrated accurately, without user involvement, ensuring a secure and reliable migration.

Self-service Desktop Migrator: Migrates personal data, such as archives and encrypted data, from Notes to Exchange.

System Requirements

On the Notes/Domino server

- Lotus Domino version 5.0 or higher

Note: For version 4.6, please contact Quest Support.

- An account must be defined with administration rights to the Domino server

Target Exchange Server

- Exchange 2000 or 2003, with Recipient Update Service set to Always Run
- An account must be defined with administrator access to the Exchange environment
- An account must be defined with administrator access to the Active Directory environment

Migration Machine(s)

- Windows XP SP 2 or Windows 2003 Server SP1
- Write/execute permissions
- Lotus Notes must be installed and configured and the Notes client version must be at or higher than the Domino server version
- Outlook 2000, 2002 or 2003 must be installed

Required for any Exchange

Administrative Functions

- Windows Administration Tools (adminpak.msi)
- Exchange System Administration Tools

SQL Server

Access to a SQL server is required
Note: SQL Express is included with Notes Migrator for Exchange, or it can utilize an existing Microsoft SQL Server, version 2000 or 2005, that you have available.

Maintain Message Integrity: This preserves valuable information including dates, times, HTML formatting, senders, recipients and attachments. It also allows users to reply to migrated messages, without making address edits.

Converts Personal Address Books and Distribution Lists into Contacts on the Exchange

Server: Notes Migrator eliminates the need for cumbersome export/import and data entry procedures. It preserves key address book information, such as phone numbers, fax numbers, mailing addresses, nicknames and distribution lists.

Archive Conversion: Valuable archived mail, calendar and task data is migrated from the local stores of Notes Migrator to Outlook personal stores.
